California. This seems to be an error for two reasons: (1) I examined all specimens in Horn's series—the only ones ever assigned to this species—and all bear Baja California locality labels; and (2) the three localities are all in the semi-tropical Cape District (below 24° latitude) of Baja California, separated from the state of California by over 600 miles of arid terrain. In view of this, *opaculus* should be dropped from lists of the United States fauna.

ACKNOWLEDGMENTS

I owe special thanks to the following: Dr. J. G. Franclemont, Cornell University, patiently read an early draft of this paper; Dr. L. L. Pechuman, Cornell University, allowed me access to material in his care; Miss Alexis Eichman, The College of Idaho, transformed my rough draft into a finished manuscript.

ADDITIONS TO THE NATURAL HISTORY OF MANICA

GEORGE C. WHEELER AND JEANETTE WHEELER

While our recent article (this *Journal* 43: 129–162) was in press we received from Mr. George Le Masne of Marseilles separates of two interesting articles reporting his observations on *M. rubida*. The citations should be appended to our treatise. A fuller treatment may be obtained by writing us at the Desert Research Institute, Reno, Nevada 89507.
