Abstract

Throughout the history of the classification of extant ferns (monilophytes) and lycophytes, familial and generic concepts have been in great flux. For the organisation of lycophytes and ferns in herbaria, books, checklists, indices and spore banks and on the internet, this poses a problem, and a standardized linear sequence of these plants is therefore in great need. We provide here a linear classification to the extant lycophytes and ferns based on current phylogenetic knowledge; this provides a standardized guide for organisation of fern collections into a more natural sequence. Two new families, Diplaziopsidaceae and Rhachidosoraceae, are here introduced.

Key words: club mosses, fern classification, floras, herbarium curation, monilophytes, synonymy, new families, pteridophytes, synonymy

Introduction

The taxonomic treatment of extant ferns (monilophytes) and lycophytes and the varying opinions throughout the history of fern classification are problematic for those who need to organise collections of ferns and lycophytes. Linear sequences of plant families are useful for herbarium curators who wish to arrange collections systematically rather than alphabetically. Linear sequences are also beneficial for organising ferns and lycophytes systematically in floras, books, indices, checklists, conservation assessments and listings on the internet. Most importantly a number of large herbaria (e.g. BM, E, H, K, L, P, QBG, WA) are currently in the process of reorganising (at least part of) their collections, requiring linear classifications (J. A. Wearn, RBG Kew, pers. comm.). Linear sequences for angiosperms based on modern phylogenetic studies are available based on APG-III (Angiosperm Phylogeny Group 2009, Haston *et al.* 2009), which these herbaria plan to follow, but a modern sequence for ferns and lycophytes has not thus far been published.

Our linear classification stands in the tradition of a universally ignored linear system by Crabbe *et al.* (1975), who proposed a system for managing fern collections based on the knowledge available at the time. However, they felt that ‘the family concept was still in a state of flux, needing considerable monographic work at the genus and species level’, so they provided their higher classification tentatively and only as a general layout to organize the genera. They organized the ferns and ‘fern allies’ following seven assemblages, placing genera within these based on a consensus discussed in Jermy *et al.* (1973) and Taylor & Mickel (1974). The history of fern classification preceding this linear sequence has been discussed in great detail by Tryon (1952), from the early classifications by Smith (1810, fig. 1), Presl (1836) and Smith (1875) to Ching (1940) and Copeland (1947), to name only a few.

Classification of extant ferns and their allies was often regarded as highly unstable during the second half of the 20th century. Various systems were proposed, reflecting different opinions on the interpretation of the accessible evidence. In general, the proposed systems reflect a change from an artificial system to the grouping of more natural entities. It generally also shows a progression from the often broad family concepts preferred at the end of the 19th and early 20th century (e.g. Hooker 1844–1864, Hooker & Baker 1868, Christ 1897, Diels 1899–1900, Christensen 1906) to systems with more but narrower families (e.g. Pichi Sermolli 1977). In the mid of the 20th century researchers with collecting experience in the Asian tropics (Ching 1940, Copeland 1947, Holttum 1947) incorporated major changes into fern classifications. These developments provided less artificial systems and were summarized in the most influential classifications at the end of the 20th century by Tryon & Tryon (1982) and Kramer & Green (1990). The arrival of phylogenetics, and molecular phylogenetics in particular, has rapidly improved our understanding of fern relationships through phylogenetic analyses of DNA sequence data (e.g. Hasebe *et al.* 1994, 1995, Pryer *et al.* 2001, 2004, Schneider *et al.* 2004a, Schuettpelz *et al.* 2006, Schuettpelz & Pryer 2007), morphological data alone (Schneider 1996, Stevenson & Loconte 1996, Schneider *et al.* 2009), or combined analyses of molecular and morphological evidence (Pryer *et al.* 1995, 2001, Schneider 2007, Lehtonen *et al.* 2010). Results of these studies were summarized in a ground-breaking classification published by Smith *et al.* (2006a, updated in 2008). However, the classifications of Smith *et al.* (2006a, 2008) were not designed as linear classifications for implementation in collections, floras and textbooks, and they excluded a classification of lycophytes, which are generally included with ferns in herbaria and many books.

Based on these classifications of Smith *et al.* (2006a, 2008) with minor alterations (based e.g. on Wang *et al.* 2004, Schuettpelz & Pryer 2007, Christenhusz 2009a, Schneider *et al.* 2009, Lehtonen *et al.* 2010, Wei *et al.* 2010), we hereby produce a linear sequence of the vascular seed-free plant classes (ferns and lycophytes). We aim for a broad use of this linear sequence, varying from fern books, checklists and major floras, to the sequence in major fern collections, nurseries, gardens, herbaria and spore banks and on the internet.

In the list below we provide full synonymy of higher taxa and provide a linear sequence of the classes, subclasses, orders and families. Within families the number of accepted genera is given and a list of genera is provided alphabetically. Because many genera are still poorly defined and more studies at the generic level are needed—especially on relationships among genera in the largest families Aspleniaceae, Athyriaceae, Blechnaceae, Dryopteridaceae, Polypodiaceae, Pteridaceae, Tectariaceae and Thelypteridaceae—we have not fully organized the genera within the families according to a phylogenetic tree, although our list in Appendix 2 is a first attempt to do so. This can be completed in the future when the generic relationships are clarified further. If extinct fossil taxa are to be included some additional ranks will need to be added. In this sequence we do not account for fossil names, but future classification will need to integrate extant and fossil lineages to overcome the current use of the same names in classifications of extant or fossil taxa. To aid appropriate usage and current familial placement of genera, we provide a list of genera, including synonyms and the families to which these genera belong (Appendix 1). We attempt to account for all validly published generic names of extant taxa, although it is of course possible that one or two have slipped our attention. Please notify us about errors or omissions so we can improve our list for a future update.

Based on recent phylogenetic studies, we found that some genera should be merged with others. To accommodate for these generic changes some new combinations are provided. In the linear sequence presented below we accept for lycophytes three families with five genera and for ferns 45 families with about 280 genera. We recognize each of the five major clades as subclasses, in line with the classification of Chase & Reveal (2009).

Linear sequence

[lycophytes]

Subclass I. **Lycopodiidae** Bek., *Kurs Bot.* 1: 115 (1863).

Selaginellidae Knobl. in J.E.B. Warming, *Handb. Syst. Bot.*: 157 (1890).

Isoëtidæ Reveal, *Phytologia* 79: 70 (1996).

Order A. **Lycopodiales** DC. ex Bercht. & J. Presl, *Přir. Rostlin*: 272 (1820).

1 family.

Family 1. Lycopodiaceæ P. Beauv. ex Mirb. in Lam. & Mirb., *Hist. Nat. Vég.* 4: 293 (1802).

Phylloglossaceæ Kunze, *Bot. Zeitung (Berlin)* 1: 722 (1843).

Huperziaceæ Rothm., *Repert. Spec. Nov. Regni Veg.* 66: 236 (1962).

1–3 genera, perhaps more. (*Huperzia* Bernh., *Lycopodiella* Holub, *Lycopodium* L.).

Note:—The genus *Phylloglossum* Kunze is embedded in *Huperzia* (Wikström & Kenrick 1997), the combination is provided below.

References: DiMichele & Skog (1992), Herter (1949–1950), Markham *et al.* (1983), Øllgaard (1975, 1979, 1987, 1990), Wagner (1992), Wikström (1999), Wikström *et al.* (1999).

Order B. **Isoëtales** Prantl, *Lehrb. Bot.*: 116 (1874).

1 family.

Family 2. Isoëtaceæ Reichenb., *Bot. Damen*: 309 (1828).

1 genus (*Isoëtes*).

References: Hoot *et al.* (2004, 2006), Rydin & Wikström (2002), Schuettpelz & Hoot (2006), Taylor & Hickey (1992), Taylor *et al.* (2004).

Order C. **Selaginellales** Prantl, *Lehrb. Bot.*: 116 (1874).

1 family.

Family 3. Selaginellaceæ Willk., *Anleit. Stud. Bot.* 2: 163 (1854).

1 genus (*Selaginella*).

References: Korall & Kenrick (2004), Korall *et al.* (1999).

[ferns]

Subclass: II **Equisetidae** Warm., *Osnov. Bot.*: 221 (1883).

Order D. **Equisetales** DC. ex Bercht. & J. Presl, *Přir. Rostlin*: 271 (1820).

1 family.

Family 4. Equisetaceæ Michx. ex DC., *Essai Propr. Méd. Pl.*: 49 (1804).

1 genus (*Equisetum*).

References: Des Marais *et al.* (2003), Guillon (2004, 2007), Hauke (1963, 1978), Schaffner (1930).

Note:—The placement of Equisetidae is still somewhat unclear. Some studies based on plastid DNA place the subclass as sister to Marattiidae (Pryer *et al.* 2004, Smith *et al.* 2006a), but Rai & Graham (2010) found Equisetidae to be sister to the rest of the ferns. This sister relationship is more consistent with the fossil record (Taylor *et al.* 2009) and agrees with the group's morphology, although we think it is preferable to include the horsetails within the lineage of ferns—Polypodiopsida (following Pryer *et al.* 2001).

Subclass: III **Ophioglossidae** Klinge, *Fl. Est.-Liv-Churland* 1: 94 (1882).

Psilotidae Reveal, *Phytologia* 79: 70 (1996).

Order E. **Ophioglossales** Link, *Hort. Berol.* 2: 151 (1833).

1 family.

Family 5. Ophioglossaceae Martinov, *Tekhno-Bot. Slovar*: 438 (1820).

Botrychiaceae Horan., *Char. Ess. Fam.* 15 (1847).

Helminthostachyaceae Ching, *Bull. Fan Mem. Inst. Biol. Bot.* 10: 235 (1941).

5 genera (*Cheiroglossa*, *Botrychium*, *Helminthostachys*, *Mankyua*, *Ophioglossum*).

References: Hauk *et al.* (2003), Kato (1988), Sun *et al.* (2001), Wagner & Wagner (1983).

Order F. **Psilotales** Prantl, *Lehrb. Bot.*, ed. 5: 183 (1884).

1 family.

Family 6. Psilotaceae J.W.Griff. & Henfr., *Microgr. Dict.*: 540 (1855).

Tmesipteridaceae Nakai, *Chosakuronbun Mokuroku [Ord. Fam. Trib. Nov.]*: 206 (1943).

2 genera (*Psilotum*, *Tmesipteris*).

References: Bierhorst (1977), Brownsey & Lovis (1987), Gensel (1977).

Subclass: IV **Marattiidae** Klinge, *Fl. Est.-Liv-Churland* 1: 93 (1882).

Order G. **Marattiales** Link, *Hort. Berol.* 2: 148 (1833).

Christenseniales Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 7 (2001).

1 family.

Family 7. Marattiaceae Kaulf., *Enum. Filic.*: 31 (1824), *nom. cons. prop.*

Danaeaceae C.Agarde, *Aphor. Bot.*: 117 (1822).

Angiopteridaceae Féé ex J.Bommer, *Bull. Soc. Roy. Bot. Belgique* 5: 345 (1867).

Christensiaceae Ching, *Bull. Fan Mem. Inst. Biol. Bot.* 10: 227 (1940).

6 genera (*Angiopteris*, *Christenia*, *Danaea*, *Eupodium*, *Marattia*, *Ptisana*).

References: Christenhusz (2007, 2010a), Christenhusz *et al.* (2008), Hill & Camus (1986), Murdock (2008a, 2008b), Rolleri (2002, 2003).

Note:—The placement of *Christenia* and *Angiopteris* make *Marattia* s.l. polyphyletic. It has therefore been divided into three genera: the New World *Eupodium* with stalked synangia, the Old World genus *Ptisana*, rendering *Marattia* s.s. to be endemic to the Neotropics and Hawaii.

Subclass: V **Polypodiidae** Cronquist, Takht. & Zimmerm., *Taxon* 15: 133 (1966).

Pterididae Schmakov, *Turczaninowia* 4: 42 (2001).

Dennstaedtiidae Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 10 (2001).

Marsileidae Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 10 (2001).

Plagiogyriidae Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 12 (2001).

Order H. **Osmundales** Link, *Hort. Berol.* 2: 138 (1833).

1 family.

Family 8. Osmundaceae Martinov, *Tekhno-Bot. Slovar*: 445 (1820).

4 genera (*Leptopteris*, *Osmunda*, *Osmundastrum*, *Todea*).

Reference: Metzgar *et al.* (2008), Yatabe *et al.* (1999).

Order I. **Hymenophyllales** A.B.Frank in J.Leunis, *Syn. Pflanzenk.*, ed. 2, 3: 1452 (1877).

1 family.

Family 9. Hymenophyllaceae Mart., *Consp. Regni Veg.*: 3 (1835).

Trichomanaceae Burmeist., *Handb. Naturgesch.*: 196 (1836).

2 or more genera.

References: Dubuisson (1996, 1997), Dubuisson *et al.* (2003), Ebihara *et al.* (2002, 2006, 2007), Hennequin *et al.* (2003, 2008).

Note:—The family consists of two major clades corresponding to the classical genera *Hymenophyllum* and *Trichomanes*. The latter is divided into 8 genera (Ebihara *et al.* 2006): *Abrodictyum*, *Callistopteris*, *Cephalomanes*, *Crepidomanes*, *Didymoglossum*, *Polyphlebium*, *Trichomanes* and *Vandenboschia*.

Order J. Gleicheniales Schimp., *Traité Paléont. Vég.* 1: 669 (1869).

Matoniales Pic.Serm. ex Reveal, *Phytologia* 74: 175 (1993).

Stromatoperidales Pic.Serm. ex Reveal, *Phytologia* 74: 176 (1993).

Dipteridales Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 10 (2001).

3 families.

Family 10. Gleicheniaceae C.Presl, *Reliq. Haenk.*: 1: 70 (1825).

Stromatopteridaceae Bierh., *Phytomorphology* 18: 263 (1968).

6 genera (*Dicranopteris*, *Diplopterygium*, *Gleichenella*, *Gleichenia*, *Sticherus*, *Stromatopteris*).

Family 11. Dipteridaceae Seward & E.Dale, *Philos. Trans., ser. B* 194: 487 (1901).

Cheiroleuriaceae Nakai, *Bot. Mag. (Tokyo)* 42: 210 (1928).

2 genera (*Cheiroleuria*, *Dipteris*).

Reference: Kato *et al.* (2001).

Family 12. Matoniaceae C.Presl, *Gefässbündel Farrn*: 32 (1847).

2 genera (*Matonia*, *Phanerosorus*).

Reference: Kato & Setoguchi (1998).

Order K. Schizaeales Schimp., *Traité Paléonnt. Vég.* 1: 674 (1869).

3 families.

Reference: Dettmann & Clifford (1992), Skog *et al.* (2002), Wikström *et al.* (2002).

Family 13. Lygodiaceae M.Roem., *Handb. Allg. Bot.* 3: 520 (1840).

1 genus (*Lygodium*).

Reference: Madeira *et al.* (2008).

Family 14. Schizaeaceae Kaulf., *Wesen Farrenkr.*: [119] (1827).

2 genera (*Actinostachys*, *Schizaea*).

Reference: Wikström *et al.* (2002).

Family 15. Anemiaceae Link, *Fil. Spec.*: 23 (1841).

1 genus (*Anemia*).

Note:—*Mohria* is embedded in *Anemia* (Wikström *et al.* 2002); the combinations to accommodate for this change are made below.

Order L. Salviniales Bartl. in Mart., *Consp. Regn. Veg.*: 4 (1835).

Pilulariales Bercht. & J.Presl, *Přir. Rostlin*: 272 (1820).

Marsileales Bartl. in Mart., *Consp. Regn. Veg.*: 4 (1835).

2 families.

Family 16. Marsileaceae Mirb. in Lam. & Mirb., *Hist. Nat. Vég.* 5: 126 (1802).

Pilulariaceae Mirb. ex DC., *Essai Propr. Méd. Pl.*: 48 (1804).

3 genera (*Marsilea*, *Pilularia*, *Regnellidium*).

References: Nagalingum *et al.* (2008), Pryer (1999), Pryer & Hearn (2009), Schneider & Pryer (2002).

Family 17. Salviniaceae Martinov, *Tekhno-Bot. Slovar*: 559 (1820).

Azollaceae Wettst., *Handb. Syst. Bot.* 2: 77 (1903).

2 genera (*Azolla*, *Salvinia*).

Reference: Reid *et al.* (2006).

Order M. Cyatheales A.B.Frank in J.Leunis, *Syn. Pflanzenk.*, ed. 2, 3: 1452 (1877).

Dicksoniales Pic.Serm. ex Reveal, *Phytologia* 74: 175 (1993).

Hymenophyllopsidales Pic.Serm. ex Reveal, *Phytologia* 74: 175 (1993).

Loxsomatales Pic.Serm. ex Reveal, *Phytologia* 74: 175 (1993).

Plagiogyriales Pic.Serm. ex Reveal, *Phytologia* 74: 176 (1993).

Metaxyales Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 12. (2001).

8 families.

References: Holtum & Sen (1961), Korall *et al.* (2006a).

Family 18. Thyrsopteridaceae C.Presl, *Gefässbündel Farrn*: 22, 38 (1847), as ‘Thyrsopterideae’.

1 genus (*Thyrsopteris*).

References: Boodle (1915), Sen & Rahaman (1999).

Family 19. Loxsomataceae C.Presl, *Gefässbündel Farrn*: 31 (1847), as ‘Loxsomaceae’.

2 genera. (*Loxsoma*, *Loxsomopsis*).

References: Bower (1923), Lehnert *et al.* (2001).

Note:—The name ‘*Loxoma*’ was a spelling error and was corrected to *Loxsoma* (Hooker 1838).

Family 20. Culcitaceae Pic.Serm., *Webbia* 24: 702 (1970).

1 genus (*Culcita*).

Reference: Sen (1968).

Family 21. Plagiogyriaceae Bower, *Ann. Bot. (London)* 40: 484 (1926).

1 genus (*Plagiogyria*).

Reference: Zhang & Nooteboom (1998).

Family 22. Cibotiaceae Korall in A.R.Sm. *et al.*, *Taxon* 55: 712 (2006).

1 genus (*Cibotium*).

Reference: Smith *et al.* (2006a).

Family 23. Cyatheaceae Kaulf., *Wesen Farrenkr.*: [119] (1827).

Alsophilaceae C.Presl, *Gefässbündel Farrn*: 22 (1847).

Hymenophyllopsidaceae Pic.Serm., *Webbia* 24: 712 (1970).

4 genera (*Alsophila*, *Cyathea*, *Gymnosphaera*, *Sphaeropteris*).

Hemionitidaceae Pic.Serm., *Webbia* 21: 487 (1966).

Cheilanthaceae B.K.Nayar, *Taxon* 19: 233 (1970).

Taenitidaceae Pic.Serm., *Webbia* 29: 1 (1975).

Antrophyaceae Ching, *Acta Phytotax. Sin.* 16: 11 (1978).

Anopteridaceae Doweld, *Tent. Syst. Pl. Vasc. (Tracheophyta)*: 2 (2001).

50–60 genera (53 accepted here).

References: Beck *et al.* (2010), Gastony & Johnson (2001), Gastony & Rollo (1995, 1998), Grusz *et al.* (2009), Kirkpatrick (2007), Nakazato & Gastony (2001), Prado *et al.* (2007), Rohfels *et al.* (2008), Ruhfel *et al.* (2008), Sánchez-Barracaldo (2004), Schuettpelz *et al.* (2007), Windham *et al.* (2009), Zhang *et al.* (2005, 2007).

Subfamily 31a. Cryptogrammoideae S.Linds. *Edinburgh J. Bot.* 66(2): 358. 2009

(*Coniogramme*, *Cryptogramma*, *Llavea*).

Subfamily 31b. Ceratoptridoideae (J.Sm.) R.M.Tryon, *Amer. Fern J.* 76: 184 (1986).

‘*Parkerioideae*’ of Smith *et al.* (2006a), *nom. nud.*

(*Acrostichum*, *Ceratopteris*).

Subfamily 31c. Pteridoideae C.Chr. ex Crabbe, Jermy & Mickel, *Fern Gaz.* 11: 153 (1975).

Taenitidoideae (C.Presl) R.M.Tryon, *Amer. Fern J.* 76: 184 (1986).

(*Actiniopteris*, *Anogramma*, *Asplenopsis*, *Astrogramme*, *Cerosora*, *Cosentinia*, *Jamesonia*, *Nephopteris*, *Onychium*, *Pityrogramma*, *Pteris*, *Pterozonium*, *Syngramma*, *Taenitis*)

Note:—*Eriosorus* is united with *Jamesonia* (Sánchez-Barracaldo 2004) and *Neurocallis* and *Platyzoma* are united with *Pteris* (Schuettpeltz & Pryer 2007); the necessary combinations for these changes are made below.

Subfamily 31d. Cheilanthoideae W.C.Shih, *J. Sci. Engin. (Nation. Chung-Hsing Univ.)* 10: 211 (1973).

(*Adiantopsis*, *Aleuritopteris*, *Argyrochosma*, *Aspidotis*, *Astrolepis*, *Bommeria*, *Calciphilopteris*, *Cassebeera*, *Cheilanthes*, *Cheiloplectron*, *Doryopteris*, *Hemionitis*, *Mildella*, *Notholaena*, *Paraceterach*, *Paragymnopteris*, *Pellaea*, *Pentagramma*, *Trachypteris*, *Tryonella*).

Note:—The classification of fern genera belonging to subfamily Cheilanthoideae is not stable because many of the generic concepts do not describe natural units, e.g., *Paraceterach* as classified by Tryon *et al.* (1990) is paraphyletic (Kirkpatrick 2007) and nested in *Pellaea* s.l. The cheilantheid ferns are currently under study at the Pryer lab (Beck *et al.* 2010, Grusz *et al.* 2009, Rothfels *et al.* 2008, Windham *et al.* 2009).

Subfamily 31e. Vittarioideae (C.Presl) Crabbe, Jermy & Mickel, *Fern Gaz.* 11: 154 (1975).

Adiantoideae (C.Presl) R.M.Tryon, *Amer. Fern J.* 76: 184 (1986).

(*Adiantum*, *Ananthacorus*, *Anetium*, *Antrophyum*, *Haplopteris*, *Hecistopteris*, *Monogramma*, *Polytaenium*, *Radiovittaria*, *Rheopteris*, *Scoliosorus*, *Vittaria*).

Note:—The vittarioid ferns are embedded in the genus *Adiantum*, which is why they are here treated as a single subfamily. *Adiantum* is in need of thorough taxonomic revision.

Family 32. Cystopteridaceae Schmakov, *Turczaninowia* 4: 60 (2001).

4 genera. (*Acystopteris*, *Cystoathyrium*, *Cystopteris*, *Gymnocarpium*).

Description:—Plant small to medium sized, in forest or in crevices. Rhizome slender long creeping, or shorter creeping, or short erect or ascending; lamina 1-3-pinnate; veins free; sori small, round to cup-shaped, dorsal on veinlets; indusia small, thin, ovate, or oval, attached at bases, scale-like and immersed by mature sporangia, or exindusiate; $x=42, 41, 40$.

Note:—Schuettpelz & Pryer (2007) found *Gymnocarpium* and *Cystopteris* to be sister to the rest of eupolypods II. Therefore these genera and the allied *Acystopteris* and *Cystoathyrium* are placed in their own family, which is here defined in a phylogenetic sense.

Family 33. Aspleniaceae Newman, *Hist. Brit. Ferns:* 6 (1840).

2 genera. (*Asplenium*, *Hymenasplenium*).

References: Murakami & Schaal (1994), Murakami *et al.* (1999), Perrie & Brownsey (2005), Pinter *et al.* (2002), Schneider *et al.* (2004b, 2005).

Note:—The studies cited above have shown that nearly all segregates of *Asplenium* (e.g. *Camptosorus*, *Ceterach*, *Diellia*, *Loxoscaphe* and *Phyllitis*) nest within it. In addition many intergeneric hybrids are known. Therefore Smith *et al.* (2006a) recognised only two genera in Aspleniaceae that are cytologically segregated, which we follow here.

Family 34. Diplaziopsidaceae X.C.Zhang & Christenb., fam. nov.

3 genera (*Diplaziopsis* (type of the family), *Hemidictyum*, *Homalosorus*).

*Filices mediocres vel grandes; rhizomatibus crassis, erectis vel decumbentibus; laminis 1-pinnatis, imparipinnatis, pinnis integris, glabris; venis lateribus utroque costulae latere discretis sed margines versus reticulatim anastomosantibus, areolarum 2–4 series facientibus, sine venulis discretis inclusis; soris secus venas longas prope costulam elongatis, indusio similiter elongato membranaceo obtectis; indusis plerumque 3–8 mm, interdum ad 1–2 cm longis, arcuatis, allantoideis; numero basico chromosomatuum x=31, 40, 41. Genus quod est typus familiae: *Diplaziopsis* C.Chr.*

Description: Medium or large ferns, usually in forests near or by streams. Rhizomes decumbent to erect, thick; lamina 1-pinnate, imparipinnate, with pinnae entire, glabrous; veins free on either side of the midrib, but fully anastomosing toward the margins where they form 2–4 rows of areoles, without included free veinlets; sori elongate along the long veins close to the midrib, covered by a similarly elongates, membranous indusium; indusia usually 3–8 mm, sometimes up to 1–2 cm long, arched, sausage-like; spores with wing-like fimbriate and echinate folds, or low perforate plain folds. $X=41, 40$ or 31.

Notes:—*Homalosorus pycnocarpos* (Spreng.) Pic.Serm. has been transferred to *Diplaziopsis* by Price (1990). Different from the Asian *Diplaziopsis* with $x=41$, the temperate North American *Homalosorus pycnocarpos* has $x=40$ and the tropical American genus *Hemidictyum marginatum* with $x=31$. *Hemidictyum* was first shown to be sister to the Aspleniaceae by Schuettpelz & Pryer (2007), but no *Diplaziopsis* was included in their study. Here, we incorporate new evidence generated in the laboratory of X.-C. Zhang, and place these genera in one family (Wei *et al.* 2010). The inclusion of *Hemidictyum* in Diplaziopsidaceae is however still tentative; further studies will have to confirm its placement.

Family 35. Thelypteridaceae Pic.Serm., *Webbia* 24: 709 (1970).

5 or more genera

References: Smith (1986), Smith & Cranfill (2002), Yatabe *et al.* (2002).

Note:—Five genera (*Cyclosorus*, *Macrothelypteris*, *Phegopteris*, *Pseudophegopteris*, *Thelypteris*) recognised by Smith (in Kramer & Green 1990) and several formally proposed genera were treated as subgenera in *Cyclosorus* and *Thelypteris*. The current understanding of the relationships within the family is limited and thus we employ a conservative approach with large genera concepts for species belonging to *Cyclosorus* and *Thelypteris*. Narrower genera concepts are discussed to be replaced these two large genera but the current evidence is insufficient to make final conclusions.

Family 36. Woodsiaceae Herter, *Rev. Sudamer. Bot.* 9: 14 (1949).

1–3 genera (*Cheilanthspsis*, *Hymenocystis*, *Woodsia*).

Notes:—Woodsiaceae formerly included Athyriaceae and Diplaziopsidaceae. The family is here defined in its narrowest sense, including only *Woodsia* and two very closely related genera that, pending further evidence, may have to be merged with *Woodsia* in the future.

The lineages of Athyriaceae, Cystopteridaceae, Diplaziopsidaceae and Rachidosoraceae are found consistently segregated in all analyses, independently of sampling. Despite the relationships among these groups is not always resolved these lineages cannot be united with other large lineages. They are therefore treated as separate families.

Family 37. Rhachidosoraceae X.C.Zhang, *fam. nov.*

Based on a full and direct reference to the Latin description associated with *Athyriaceae* subfam. *Rhachidosoroideae* M.L.Wang & Y.T.Hsieh, *Acta Phytotax. Sin.* 42: 527 (2004).

1 genus. (*Rhachidosorus* Ching, type of the family).

Description:—Medium to large ferns in forest often at rocky (limestone) places. Rhizomes thick, erect to decumbent, apexes and bases of stipes densely covered in scales; laminae 2–3-pinnate, deltoid to ovate-deltoid; sori linear, falcate, touching midveins at proximal ends, subparallel to midveins; indusia more or less thick, entire, on acroscopic side of lateral veinlets, asplenoid, spores with tuberculate folds. $X=40$.

A genus with ca. 7 species, distributed in east and southeast Asia, from Japan to Sumatra and the Philippines. *Rhachidosorus* was not included in Schuettpelz & Pryer (2007) and the results of Wang *et al.* (2003, 2004) were not accepted by Smith *et al.* (2006a, 2008).

Family 38. Onocleaceae Pic.Serm., *Webbia* 24: 708 (1970).

1(–4) genera: (*Onoclea*).

Reference: Gastony & Ungerer (1997).

Note:—The four genera (*Matteuccia*, *Onoclea*, *Onocleopsis* and *Pentarhizidium*) are very close and are here treated under the single genus *Onoclea*.

Family 39. Blechnaceae Newman, *Hist. Brit. Ferns*, ed. 2: 8 (1844).

Stenochlaenaceae Ching, *Acta Phytotax. Sin.* 16: 18 (1978).

2–9 genera. (*Blechnum*, *Brainea*, *Pteridoblechnum*, *Sadleria*, *Salpichlaena*, *Stenochlaena*, *Woodwardia*).

References: Nakahira (2000), Cranfill (2001), Cranfill & Kato (2003).

Note:—The genus *Doodia* is embedded in *Blechnum* (Shepherd *et al.* 2007). Combinations for these are presented below. *Blechnum* in its current circumscription, even including *Doodia*, is likely to be paraphyletic. The status of other genera such as *Brainea*, *Pteridoblechnum*, *Sadleria*, *Salpichlaena* and *Stenochlaena* is therefore not yet clear, but some of these should probably be included in *Blechnum sensu lato* (see Cranfill 2001). Further studies on the generic delimitation in this family are necessary.

Family 40. Athyriaceae Alston, *Taxon* 5: 25 (1956).

5 genera. (*Anisocampium*, *Athyrium*, *Cornopteris*, *Deparia*, *Diplazium*)

Reference: Kato (1977), Wang *et al.* (2004).

The Athyriaceae include the majority of genera placed by Smith *et al.* (2006a, 2008) in Woodsiaceae. The generic classification will need further study especially in the context of the monophyly of *Athyrium* and *Diplazium*.

Family 41. Hypodematiaceae Ching, *Acta Phytotax. Sin.* 13: 96 (1975).

3 genera (*Didymochlaena*, *Hypodematum*, *Leucostegia*).

Reference: Liu *et al.* (2007a), Tsutsumi & Kato (2006), Schuettpelz & Pryer (2007).

Note:—These genera were not traditionally found to be associated with each other. *Hypodematum* was associated with the athyrioid ferns, *Didymochlaena* was previously placed in Dryopteridaceae and *Leucostegia* in Davalliaceae. Several studies (Liu *et al.* 2007a, Tsutsumi & Kato 2006, Schuettpelz & Pryer 2007) have shown nearly simultaneously that these are related and probably form the sister clade to 'Eupolypods I'.

Family 42. Dryopteridaceae Herter, *Rev. Sudamer. Bot.* 9: 15 (1949), *nom. cons.*

Aspidiaceae Mett. ex A.B.Frank in Leunis, *Syn. Pflanzenk. ed. 2. 3:* 1469 (1877), *nom. illeg.*

Filicaceae Juss., *Gen. Pl.: 14.* (1789), as 'Filices', *nom. illeg., rej.*

Peranemataceae Ching, *Sunyatsernia* 5: 208 (1940), *nom. rej.*

Elaphoglossaceae Pic.Serm., *Webbia* 23: 209 (1968).

Bolbitidaceae Ching, *Acta Phytotax. Sin.* 16: 15 (1978).

About 34 genera.

References: Li & Lu (2006), Li *et al.* (2008), Liu *et al.* (2007a, 2010), Moran *et al.* (2010a, b), Rouhan (2004).

Note:—Further studies at the generic level are still necessary for the correct placement of genera and to confirm the monophyly of the species-rich genera *Dryopteris* and *Polystichum*.

Insertis sedis: *Adenoderris*, *Coveniella*, *Dracoglossum*, *Revwattsia*, *Stenolepia*.

Subfamily 42a. Dryoptridoideae B.K.Nayar, *Taxon* 19: 235 (1970).

(*Acrophorus*, *Acrorumohra*, *Arachniodes*, *Ctenitis*, *Cyrtogonellum*, *Cyrtomidictyum*, *Cyrtomium*, *Diocalpe*, *Dryopolystichum*, *Dryopsis*, *Dryopteris*, *Leptorumohra*, *Lithostegia*, *Peranema*, *Phanerophlebia*, *Polystichopsis*, *Polystichum*).

Subfamily 42b. Elaphoglossoideae (Pic.Serm.) Crabbe, Jermy & Mickel, *Fern Gaz.* 11: 154 (1975). Based on *Elaphoglossaceae* Pic.Serm.

(*Arthrobotrya*, *Bolbitis*, *Cyclodium*, *Elaphoglossum*, *Lastreopsis*, *Logramma*, *Maxonia*, *Megalastrum*, *Mickelia*, *Olfersia*, *Polybotrya*, *Rumohra*, *Stigmatopteris*, *Teratophyllum*).

Family 43. Lomariopsidaceae Alston, *Taxon* 5: 25 (1956).

3 genera (*Cyclopeltis*, *Lomariopsis*, *Thysanosoria*).

References: Moran (2000), Rouhan *et al.* (2007), Tsutsumi & Kato (2006), Schuettpelz & Pryer (2007), Liu *et al.* (2007a).

Family 44. Nephrolepidaceae Pic.Serm., *Webbia* 29: 8 (1975).

1 genus (*Nephrolepis*).

References: Hennequin *et al.* (2010), Hovenkamp & Miyamoto (2005).

Note:—The genus *Nephrolepis* has always been difficult to place. It has previously been associated with Davalliaceae and Oleandraceae (Kramer & Green 1990). Smith (2006a, 2008) places it in Lomariopsidaceae, which shares the articulate pinnae. This association is however not satisfactory because the exact phylogenetic placement is still uncertain. We therefore place it tentatively in its own family until further data are available.

Family 45. Tectariaceae Panigrahi, *J. Orissa Bot. Soc.* 8: 41 (1986).

Dictyoxiphiaeae Ching, *Sunyatsernia* 5: 205, 218. 1940, *nom. inval.*

Hypoderriaceae Ching, *Sunyatsernia* 5: 209, 245. 1940, *nom. inval.*

6–10 genera. (*Aenigmopteris*, *Arthropteris*, *Hypoderris*, *Pleocnemia*, *Psammiosorus*, *Psomiocarpa*, *Pteridrys*, *Tectaria*, *Triplophyllum*, *Wagneriopteris*).

References: Christenhusz (2010b), Liu (2007b).

Note:—*Arthropteris* has been tentatively placed here by Smith *et al.* (2006a), but Liu (2007b) placed it in Dryopteridaceae. The correct placement of this genus is still uncertain. This family is poorly defined, especially when *Arthropteris* and *Psammiosorus* are included. The number of genera that belong to Tectariaceae is still uncertain.

Family 46. Oleandraceae Ching ex Pic.Serm., *Webbia* 20: 745 (1965).

1 genus (*Oleandra*).

References: Tryon (1998, 2000).

Family 47. Davalliaceae M.R.Schomb., *Reis. Br.-Guiana (Ri. Schomburgk)* 2: 883 (1848).

2 genera (*Davallia*, *Davalloides*).

Reference: Kato & Tsutsumi (2009), Tsutsumi & Kato (2006), Tsutsumi *et al.* (2008).

Note:—Tsutsumi and collaborators (2006, 2008) provided a phylogeny of the Davalliaceae, in which they found *Davallia* to be polyphyletic and proposed to recognise the 5 clades at the generic level. This classification creates an inflated number of genera and an alternative two genera concept can also be considered. They proposed the genus *Araiostegiella* Kato & Tsutsumi (2008) and reinstated *Wibelia* Bernhardi (1801: 122), the latter being a later homonym of *Wibelia* Gaertner *et al.* (1801: 97, 144), a genus of Asteraceae (= *Crepis*), and thus a new genus is needed to accommodate for *Wibelia* Bernh. Most species have combinations in *Davallia* and it seems appropriate to consider a broader concept for *Davallia* that includes *Araiostegiella* and *Humata*. To divide *Davallia*, the issue remains to which of the five clades the name *Davallia* should be applied, because the geographically isolated *D. canariensis* (L.) Sm., the type species, is not included in these studies. Without establishing to which clade this species belongs, a generic subdivision will be difficult to validate. *Davalloides* (incl. *Araiostegia*) as treated by Tsutsumi *et al.* (2008) is followed here, reducing the number of genera to two, but this may require updating using an improved phylogenetic analyses in the near future.

Family 48. Polypodiaceae J.Presl & C.Presl, *Delic. Prag.*: 159 (1822).

Grammitidaceae Newm., *Hist. Brit. Ferns*: 7 (1840).

Gymnogrammitidaceae Ching in *Acta Phytotax. Sin.* 11: 12 (1966).

Loxogrammaceae Ching ex Pic.Serm. in *Webbia* 29: 11 (1975).

Drynariaceae Ching in *Acta Phytotax. Sin.* 16: 19 (1978).

Platyceriacae Ching in *Acta Phytotax. Sin.* 16: 18 (1978).

Pleurisoriopsidaceae Kurita & Ikebe ex Ching in *Acta Phytotax. Sin.* 16: (1978).

50–80 genera (64 tentatively accepted here).

References: Janssen & Schneider (2005), Kreier *et al.* (2008), Labiak *et al.* (2010a, b), Otto *et al.* (2009), Parris (2007), Ranker (2004), Schneider *et al.* (2004a, c, 2006a, b, 2008, 2010), Smith *et al.* (2006b), Wang *et al.* (2010a, b).

Subfamily 48a. Loxogrammoideae H.Schneid., subfam. nov. (*Dictymia, Loxogramme*).

Basionym: *Loxogrammaceae* Ching ex Pic.Serm., *Webbia* 29: 11 (1974).

Type: *Loxogramme*.

Subfamily 47b. Drynarioideae Crabbe, Jermy & Mickel, *Fern Gaz.* 11: 156 (1975).

(*Aglaomorpha, Arthromeris, Christiopteris, Drynaria, Gymnogrammitis, Paraselliguea, Phymatopteris, Polypodiopteris, Selliguea*).

Note:—This subfamily includes the drynarioid and selligueoid ferns. The genus number of both groups is currently uncertain. We are recognizing the genera that are currently widely accepted.

Subfamily 48c. Platycerioideae B.K.Nayar, *Taxon* 19: 233 (1970).

(*Platycerium, Pyrrosia*).

Subfamily 48d. Microsoroideae B.K.Nayar, *Taxon* 19: 233 (1970), as 'Microsorioideae'.

Lepisoroideae Ching, *Acta Phytotax. Sin.* 16: 17 (1978), as 'Lepisorioideae'.

(*Dendroconche*, *Goniophlebium*, *Kaulinia*, *Kontumia*, *Lecanopteris*, *Lemmaphyllum*, *Lepisorus*, *Lepidomicrosorium*, *Leptochilus*, *Microsorum*, *Neocheiropteris*, *Neolepisorus*, *Paragamma*, *Phymatosorus*, *Podosorus*, *Thylacopteris*, *Tricholepidium*).

Note:—The status of several genera of this group is controversial (Kreier *et al.* 2008). The genus *Microsorum* is polyphyletic and will need to be separated into natural genera in the future. The monotypic genus *Kontumia* is tentatively assigned to the microsoroid ferns and not to the selligueoid ferns as suggested by Wu *et al.* (2005). This assignment is based on observations of the rhizome scales carried out by P. Hovenkamp (Leiden) who studied the type material. Currently, we are lacking DNA sequences to confirm its relationship.

Subfamily 48e. Polypodioidae B.K.Nayar, *Taxon* 19: 234 (1970).

Pleopeltidoideae B.K.Nayar, *Taxon* 19: 234 (1970).

(*Campyloneurum*, *Microgramma*, *Niphidium*, *Pecluma*, *Phlebodium*, *Pleopeltis*, *Pleurosoriopsis*, *Polypodium*, *Serpocaulon*, *Synammia*, and the grammitids: *Acrosorus*, *Adenophorus*, *Calymmodon*, *Ceradenia*, *Chrysogrammitis*, *Cochlidium*, *Ctenopteris*, *Dasygrammitis*, *Enterosora*, *Grammitis*, *Lellingeria*, *Leucostrichum*, *Luisma*, *Melpomene*, *Micropolypodium*, *Nematopteris*, *Oreogrammitis*, *Prosaptia*, *Radiogrammitis*, *Scleroglossum*, *Terpsichore*, *Themelium*, *Tomophyllum*, *Xiphopterella*, *Xiphopteris*, *Zygophlebia*).

Note:—The number of genera in the grammitid ferns is still in flux. A research group under the leadership of Dr. Tom Ranker is currently studying this complex.

New combinations and names

***Anemia caffrorum* (L.) Christenh., comb. nov.**

Basionym: *Polypodium caffrorum* Linnaeus (1771: 307).

***Anemia lepigera* (Baker) Christenh., comb. nov.**

Basionym: *Mohria lepigera* Baker (1891: 498).

***Anemia marginalis* (Savigny) Christenh., comb. nov.**

Basionym: *Osmunda marginalis* Savigny in Lamarck (1797: 655). Note: Roux (1990b) made the combination in *Mohria*. This is the same species as his *Mohria hirsuta* Roux (1990a).

***Anemia mohriana* Christenh., nom. nov.**

Basionym: *Mohria rigida* Roux (1990a: 268), *non Anemia rigida* Sehnem

***Anemia nudiuscula* (J.P.Roux) Christenh., comb. nov.**

Basionym: *Mohria nudiuscula* Roux (1990a: 266).

***Anemia saxatilis* (J.P.Roux) Christenh., comb. nov.**

Basionym: *Mohria saxatilis* Roux (1990b: 399).

***Anemia vestita* (Baker) Christenh., comb. nov.**

Basionym: *Mohria vestita* Baker in Oliver *et al.* (1887: 355).

***Blechnum austrocaledonicum* Christenh., nom. nov.**

Basionym: *Doodia gracilis* Copeland (1929: 362), *non Blechnum gracile* Kaulfuss

***Blechnum dissectum* (Parris) Christenh., comb. nov.**

Basionym: *Doodia dissecta* Parris (1998: 711).

***Blechnum dives* (Kunze) Christenh., comb. nov.**

Basionym: *Doodia dives* Kunze (1848: 144), as 'Doodya dives'.

***Blechnum doodianum* Christenh., nom. nov.**

Basionym: *Doodia aspera* var. *heterophylla* Bailey (1881: 51), *non Blechnum heterophyllum* Opiz, *nec Schlechtendal*.

***Blechnum hindii* (Tindale ex T.C.Chambers) Christenh., comb. nov.**

Basionym: *Doodia hindii* Tindale ex Chambers (2008: 257).

***Blechnum lineare* (J.Sm.) Christenh., comb. nov.**

Basionym: *Doodia linearis* Smith (1866: 199).

***Blechnum lyonii* (Degen.) Christenh., comb. nov.**

Basionym: *Doodia lyonii* Degener (1934: Fam. 17).

***Blechnum marquesensis* (E.Brown) Christenh., comb. nov.**

Basionym: *Doodia marquesensis* Brown in Brown & Brown (1931: 73, t. 16).

***Blechnum maximum* (J.Sm. ex C.Chr.) Christenh., comb. nov.**

Basionym: *Doodia maxima* J.Sm. ex Christensen (1906: 243).

***Blechnum medium* (R.Br.) Christenh., comb. nov.**

Basionym: *Doodia media* Brown (1810: 151).

***Blechnum molle* (Parris) Christenh., comb. nov.**

Basionym: *Doodia mollis* Parris (1980: 145).

***Blechnum neohollandicum* Christenh., nom. nov.**

Basionym: *Doodia aspera* Brown (1810: 151), non *Blechnum asperum* (Klotzsch) J.W.Sturm

***Blechnum norfolkense* Christenh., nom. nov.**

Basionym: *Doodia kunthiana* Gaudichaud (1829: 410, t. 14), non *Blechnum kunthianum* C.Chr.

***Blechnum papuanum* Christenh., nom. nov.**

Basionym: *Doodia scaberula* Parris (1978: 505), non *Blechnum scaberulum* Sodiro

***Blechnum parrisi* Christenh., nom. nov.**

Basionym: *Doodia media* subsp. *australis* Parris (1972: 593), non *Blechnum australe* L.

***Blechnum paschale* (C.Chr.) Christenh., comb. nov.**

Basionym: *Doodia paschalis* C.Chr. in Christensen & Skottsberg (1920: 48, f. 1.).

***Blechnum rupestre* (Kaulf. ex Link) Christenh., comb. nov.**

Basionym: *Doodia rupestris* Kaulf. ex Link (1833: 83).

***Blechnum spinulosum* Poir. = *Doodia caudata* (Cav.) R.Br. (*Woodwardia caudata* Cav.), non *Blechnum caudatum* Cav.**

***Blechnum zeelandicum* Christenh., nom. nov.**

Basionym: *Doodia squarrosa* Colenso (1881: 382), non *Blechnum squarrosum* Gaudich.

***Huperzia drummondii* (Kunze) Christenh. & H.Schneid., comb. nov.**

Basionym: *Phylloglossum drummondii* Kunze (1843: 721), as 'Drummondi'.

Basionym: *Platzoma recurvum* Desvaux (1827: 199) ≡ *Platzoma microphyllum* Brown (1810: 160), non *P. microphylla* Cav., nec A.Cunn., nec Colla
***Pteris rupestris* (R.Br.) Christenh., comb. nov.**

Basionym: *Gleichenia rupestris* Brown (1810: 161).
***Pteris speluncae* (R.Br.) Christenh., comb. nov.**

Basionym: *Gleichenia speluncae* Brown (1810: 161).
***Ptisana rolandi-principis* (Rosenst.) Christenh., comb. nov.**

Basionym: *Marattia rolandi-principis* Rosenstock (1911: 162).

Acknowledgments

We thank Philip Oswald for kindly providing the Latin diagnosis of Diplaziopsidaceae. We also thank James Reveal for providing help with references above the rank of family. Libraries of the Botanical Garden and Herbarium, Helsinki, the Natural History Museum, London, and the Royal Botanic Gardens, Kew are acknowledged for facilitating the consultation of numerous publications in the bibliography provided here. These institutions hold a great collection of fern specimens and associated literature and it is always a pleasure to work with such excellent material.

Appendix 1. Index to fern genera

Below we provide an alphabetic list to the genera of ferns. Accepted genera are printed in bold italics. Synonymous genera are in italics followed by the currently accepted genus and their family. Genera listed with * are problematic in their phylogeny. Genera of which the family name is accompanied by ^f are of uncertain placement.

- Abacopteris*** = *Cyclosorus* – Thelypteridaceae
Abrodictyum (= *Trichomanes*) – Hymenophyllaceae
Acanthea = *Cyathea* – Cyatheaceae
Achomanes = *Trichomanes* – Hymenophyllaceae
Aconiopteris = *Elaphoglossum* – Dryopteridaceae
Acropelta = *Polystichum* – Dryopteridaceae
Acrophorus* (= *Dryopteris*?) – Dryopteridaceae
Acropteris = *Actiniopteris* – Pteridaceae
Acropterygium = *Glechenella* – Gleicheniaceae
Acrorumohra* (= *Dryopteris*?) – Dryopteridaceae
Acrosorus – Polypodiaceae
Acrostichum – Pteridaceae (The name was in the past widely applied to species in a number of genera, most notably *Elaphoglossum*)
Actiniopteris – Pteridaceae
Actinophlebia = *Cyathea* – Cyatheaceae
Actinostachys – Schizaeaceae
Acystopteris – Cystopteridaceae
Adectum = *Dennstaedtia* – Dennstaedtiaceae
Adenoderris – Dryopteridaceae
Adenophorus – Polypodiaceae
Adiantopsis – Pteridaceae
Adiantum – Pteridaceae
Aenigmopteris – Tectariaceae
Aetopteron = *Polystichum* – Dryopteridaceae
Afropteris = *Pteris* – Pteridaceae
Aglaomorpha – Polypodiaceae
Alcicornium = *Platycerium* – Polypodiaceae
Aleuritopteris – Pteridaceae
Allantodia = *Diplazium* – Athyriaceae
Allosorus = *Cryptogramma/Cheilanthes* – Pteridaceae
Alsophila – Cyatheaceae
Amauropelta = *Thelypteris* – Thelypteridaceae
Amblia = *Phanerophlebia* – Dryopteridaceae
Amesium = *Asplenium* – Aspleniaceae
Ampelopteris = *Cyclosorus* – Thelypteridaceae
Amphiblestra = *Tectaria* – Tectariaceae
Amphicosmia = *Cyathea* – Cyatheaceae
Amphidesmium = *Alsophila* – Cyatheaceae
Amphineuron = *Cyclosorus* – Thelypteridaceae
Amphipterum = *Hymenophyllum* – Hymenophyllaceae
Amphisoria = *Polybotrya* – Dryopteridaceae
Amphoradenium = *Adenophorus* – Polypodiaceae
Ananthacorus – Pteridaceae
Anapausia = *Leptochilus* – Polypodiaceae
Anapeltis = *Phlebodium* – Polypodiaceae
Anarthropteris = *Loxogramme* – Polypodiaceae
Anaxetum = *Niphidium* – Polypodiaceae
Anchistea = *Woodwardia* – Blechnaceae
Aneimia = *Anemia* – Anemiaceae
Aneimiaeobotrys = *Anemia* – Anemiaceae
Anemia – Anemiaceae
Anemidictyon = *Anemia* – Anemiaceae
Anemirhiza = *Anemia* – Anemiaceae
Anetium – Pteridaceae
Angiopteris – Marattiaceae
Anisocampium – Athyriaceae
Anisogonium = *Diplazium* – Athyriaceae
Anisosorus = *Lonchitis* – Lonchitidaceae
Anogramma – Pteridaceae
Anopteris = *Pteris* – Pteridaceae
Antigrama = *Asplenium* – Aspleniaceae
Antiosorus = *Lonchitis* – Lonchitidaceae
Antrophyum – Pteridaceae
Apalophlebia = *Pyrrhosia* – Polypodiaceae
Aphyllocalpa = *Osmunda* – Osmundaceae
Apteropteris = *Hymenophyllum* – Hymenophyllaceae
Aquila = *Pteridium* – Dennstaedtiaceae
Arachniodes – Dryopteridaceae
Araiostegia = *Davalloides* – Davalliaceae
Araiostegiella = *Davallia* – Davalliaceae
Arcasplenium = *Asplenium* – Aspleniaceae
Archangiopteris = *Angiopteris* – Marattiaceae
Arcypteris = *Pleocnemia* – Tectariaceae
Argyrochosma – Pteridaceae
Arthrobotrya – Dryopteridaceae
Arthrobotrys = *Dryopteris* – Dryopteridaceae
Arthromeris – Polypodiaceae
Arthropoteris – Tectariaceae
Aspidium = *Tectaria* – Tectariaceae (The name was in the past applied to species in a number of genera)
Aspidotis – Pteridaceae
Asplenidictyon = *Asplenium* – Aspleniaceae
Aspleniopteris* – Pteridaceae
Asplenium – Aspleniaceae
Asteroglossum = *Lemmaphyllum* – Polypodiaceae
Astrolepis – Pteridaceae
Atalopteris = *Ctenitis* ? – Dryopteridaceae
Ataxipteris = *Ctenitis* – Dryopteridaceae
Athyriopsis = *Deparia* – Athyriaceae
Athyriorumohra = *Dryopteris* – Dryopteridaceae
Athyrium – Athyriaceae
Austrogramme – Pteridaceae
Astrolycopodium = *Lycopodium* – Lycopodiaceae
Azolla – Salviniaceae
Bakeriopteris = *Doryopteris* – Pteridaceae
Balantium = *Dicksonia* – Dicksoniaceae
Bathmium = *Tectaria* – Tectariaceae
Belvisia = *Lepisorus* – Polypodiaceae
Bergera = *Trichomanes* – Hymenophyllaceae
Bernhardia = *Psilotum* – Psilotaceae
Biropteris = *Asplenium* – Aspleniaceae

<i>Blechnidium</i>	= <i>Blechnum</i> – Blechnaceae	<i>Cheiroglossa</i> – Ophioglossaceae
<i>Blechnopsis</i>	= <i>Blechnum</i> – Blechnaceae	<i>Cheiroleuria</i> – Dipteridaceae
<i>Blechnopteris</i>	= <i>Blechnum</i> – Blechnaceae	<i>Cheiropteris</i> = <i>Neocheiropoteris</i> – Polypodiaceae

<i>Cheilanthopsis</i>	– Woodsiaceae	<i>Ctenitis</i> – Dryopteridaceae
<i>Cheilogramme</i>	= <i>Pleopeltis</i> – Polypodiaceae	<i>Ctenitopsis*</i> = <i>Tectaria</i> – Tectariaceae
<i>Cheilolepton</i>	= <i>Lomagramma</i> – Dryopteridaceae	<i>Ctenopterella</i> – Polypodiaceae
<i>Cheiloplecton</i>	– Pteridaceae	
<i>Cheilosoria</i>	= <i>Cheilanthes</i> – Pteridaceae	

Ctenopteris – Polypodiaceae
Culcita – Culcitaceae
Currania = *Gymnocarpium* – Cystopteridaceae
Cuspidaria = *Pleopeltis* – Pteridaceae
Cyathea – Cyatheaceae
Cyclodium – Dryopteridaceae
Cyclogramma = *Cyclosorus* – Thelypteridaceae
Cyclopeltis – Lomariopsidaceae
Cyclophorus = *Pyrrosia* – Polypodiaceae
Cyclopteris = *Cystopteris* – Cystopteridaceae
Cyclosorus – Thelypteridaceae
Cyrtogonellum – Dryopteridaceae
Cyrtogonium = *Bolbitis* – Dryopteridaceae
Cyrtomidictyum – Dryopteridaceae
Cyrtomium – Dryopteridaceae
Cyrtophlebium = *Campyloneurum* – Polypodiaceae
Cyste = *Cystopteris* – Cystopteridaceae
Cystea = *Cystopteris* – Cystopteridaceae
Cystidium = *Cystodium* – Cystodiaceae
Cystothrygium – Cystopteridaceae
Cystodiopteris = *Cystodium* – Cystodiaceae
Cystodium – Cystodiaceae
Cystopteris – Cystopteridaceae
Danaea – Marattiaceae
Danaeopsis = *Bolbitis* – Dryopteridaceae
Darea = *Asplenium* – Aspleniaceae
Dasygrammitis – Polypodiaceae
Davallia – Davalliaceae
Davalliosis = *Trichomanes* – Hymenophyllaceae
Davallodes – Davalliaceae
Dendroconche – Polypodiaceae
Dendroglossa = *Leptochilus* – Polypodiaceae
Dendrolycopodium = *Lycopodium* – Lycopodiaceae
Dennstaedtia – Dennstaedtiaceae
Deparia – Athyriaceae
Dermatophlebium = *Hymenophyllum* – Hymenophyllaceae
*Desmopodium** = *Thelypteris* ? – Thelypteridaceae
*Diacalpe** (= *Dryopteris*?) – Dryopteridaceae
Diblemma = *Pleopeltis* – Polypodiaceae
Dichasium = *Dryopteris* – Dryopteridaceae
Dichorexia = *Alsophila* – Cyatheaceae
Dicksonia – Dicksoniaceae
Diclidopteris = *Monogramma* – Pteridaceae
Diclidodon = *Dryopteris* – Dryopteridaceae
Dicranodium = *Anogramma* – Pteridaceae
Dicranoglossum = *Pleopeltis* – Polypodiaceae
Dicranophlebia = *Alsophila* – Cyatheaceae
Dicranopteris – Gleicheniaceae
Dictymia – Polypodiaceae
Dictyocline = *Cyclosorus* – Thelypteridaceae
Dictyodroma = *Deparia* – Athyriaceae
Dictyoglossum = *Elaphoglossum* – Dryopteridaceae
Dictyogramme = *Coniogramme* – Pteridaceae

Xiphopteris = *Cochlidium* – Polypodiaceae
Xyropteris – Lindsaeaceae
Zygophlebia – Polypodiaceae

Appendix 2. Index of fern and lycophyte genera accepted in the linear sequence.

In numerical order of family, in linear order where phylogenies are known, otherwise alphabetically within (sub-)families. Type (T) information is provided.

1. Lycopodiaceae

1.1. Huperzia Bernh., *J. Bot. (Schrader)* 1800(2): 126 (1801).

T.: *Huperzia selago* (L.) Bernh. ex Schrank & Mart. (*Lycopodium selago* L.)

1.2. Lycopodiella Holub, *Preslia* 36: 20 (1964).

T.: *Lycopodiella inundata* (L.) Holub (*Lycopodium inundatum* L.)

1.3. Lycopodium L., *Sp. Pl.* 1100 (1753).

T.: *Lycopodium clavatum* L.

2. Isoëtaceae

2.1. Isoëtes L., *Sp. Pl.* 1100 (1753).

T.: *Isoëtes lacustris* L.

3. Selaginellaceae

3.1. Selaginella P.Beauv., *Prodr.* 101 (1805), *nom. cons.*

T.: *Selaginella spinosa* P.Beauv., *nom. illeg.* = *S. selaginoides* (L.) Link

~~~~~

### **4. Equisetaceae**

**4.1. Equisetum** L., *Sp. Pl.* 2: 1061 (1753).

T.: *Equisetum fluviatile* L.

### **5. Ophioglossaceae**

**5.1. Cheiroglossa** C.Presl, *Suppl. Tent. Pterid.* 56 (1845).

T.: *Cheiroglossa palmata* (L.) C.Presl (*Ophioglossum palmatum* L.)

**5.2. Botrychium** Sw., *J. Bot. (Schrader)* 1800(2): 8 (1801).

T.: *Botrychium lunaria* (L.) Sw. (*Osmunda lunaria* L.)

**5.3. Helminthostachys** Kaulf., *Enum. Filic.* 28 (1824).

T.: *Helminthostachys dulcis* Kaulf., *nom. illeg.* = *H. zeylanica* (L.) Hook.

**5.4. Mankyua** B.-Y.Sun, M.H.Kim & C.H.Kim, *Taxon* 50: 1020 (2002).

T.: *Mankyua chejuense* B.-Y.Sun, M.H.Kim & C.H.Kim

**5.5. Ophioglossum** L., *Sp. Pl.* 1062 (1753).

T.: *Ophioglossum vulgatum* L.

### **6. Psilotaceae**

**6.1. Psilotum** Sw., *J. Bot. (Schrader)* 1800(2): 8 (1801).

T.: *Psilotum triquetrum* Sw., *nom. illeg.* = *P. nudum* (L.) P.Beauv.

**6.2. Tmesipteris** Bernh., *J. Bot. (Schrader)* 1800(2): 131 (1801).

T.: *Tmesipteris tannensis* (Spreng.) Bernh. (*Lycopodium tannense* Spreng.)

### **7. Marattiaceae**

**7.1. Danaea** Sm., *Mém. Acad. Roy. Sci. Turin* 5: 420. t. 9, f. 11 (1793), *nom. cons.*

T.: *Danaea nodosa* (L.) Sm. (*Acrostichum nodosum* L.)

**7.2. Eupodium** J.Sm., *J. Bot. (Hooker)* 4: 190 (1841).

T.: *Eupodium kaulfussii* (J.Sm. ex Hook.) J.Sm. ex Hook. (*Marattia kaulfussii* J.Sm. ex Hook.)

**7.3. Ptisana** Murdock, *Taxon* 57(3): 744 (2008).

T.: *Ptisana salicina* (Sm.) Murdock (*Marattia salicina* Sm.)

- 7.4. Christensenia** Maxon, *Proc. Biol. Soc. Washington* 18: 239 (1905). Substitute name for *Kaulfussia* Blume (1828), *non Kaulfussia* Nees (1820).  
T.: *Christensenia aesculifolia* (Blume) Maxon (*Aspidium aesculifolium* Blume)
- 7.5. Angiopteris** Hoffm., *Commentat. Soc. Regiae Sci. Gott.* 12 (Cl. Phys.): 29 (1796), *nom. cons.*, *non Angiopteris* Adanson (1763), *nom. rej.* (= *Onoclea*).  
T.: *Angiopteris erecta* (G. Forst.) Hoffm. (*Polypodium erectum* G. Forst.)
- 7.6. Marattia** Sw., *Prodr.* 8 (1788).  
T.: *Marattia alata* Sw.

## 8. Osmundaceae

- 8.1. Osmundastrum** C. Presl, *Gefässbündel Farrn* 18 (1847).  
T.: *Osmundastrum cinnamomeum* (L.) C. Presl (*Osmunda cinnamomea* L.)
- 8.2. Leptopteris** C. Presl, *Suppl. Tent. Pterid.* 70 (1845), *non Leptopteris* Blume (1850).  
T.: *Leptopteris hymenophylloides* (A. Rich.) C. Presl (*Todea hymenophylloides* A. Rich.)
- 8.3. Todea** Willd. ex Bernh., *J. Bot. (Schrader)* 1800(2): 126 (1801).  
T.: *Todea africana* Willd. ex Bernh., *nom. illeg.* = *T. barbara* (L.) T. Moore
- 8.4. Osmunda** L., *Sp. Pl.* 1063 (1753).  
T.: *Osmunda regalis* L.

## 9. Hymenophyllaceae

- 9.1. Hymenophyllum** Sm., *Mém. Acad. Roy. Sci. Turin* 5: 418. t. 9(8) (1793).  
T.: *Hymenophyllum tunbrigense* (L.) Sm. (*Trichomanes tunbrigense* L.)
- 9.2. Cephalomanes** C. Presl, *Hymenophyllaceae* 17. t. 5 (1843).  
T.: *Cephalomanes atrovirens* C. Presl
- 9.3. Abrodictyum** C. Presl, *Hymenophyllaceae* 20. t. 7 (1843).  
T.: *Abrodictyum cumingii* C. Presl
- 9.4. Trichomanes** L., *Sp. Pl.* 1097 (1753), *nom. cons.*, *non Trichomanes* Hill (1757, = *Asplenium*).  
T.: *Trichomanes crispum* L., *typ. cons.*
- 9.5. Callistopteris** Copel., *Occas. Pap. Bernice Pauahi Bishop Mus.* 14: 49 (1938).  
T.: *Callistopteris apiifolia* (C. Presl) Copel. (*Trichomanes apiifolium* C. Presl)
- 9.6. Polyphlebium** Copel., *Philipp. J. Sci.* 67: 55 (1938). Substitute name for *Phlebiophyllum* Bosch (1861), *non Phlebophyllum* Nees (1832).  
T.: *Polyphlebium venosum* (R. Br.) Copel. (*Trichomanes venosum* R. Br.).
- 9.7. Didymoglossum** Desv., *Mém. Soc. Linn. Paris* 6: 330 (1827).  
T.: *Didymoglossum muscoides* (Sw.) Desv. (*Trichomanes muscoides* Sw.)
- 9.8. Vandenboschia** Copel., *Philipp. J. Sci.* 67: 51 (1938).  
T.: *Vandenboschia radicans* (Sw.) Copel. (*Trichomanes radicans* Sw.)
- 9.9. Crepidomanes** C. Presl, *Epimel. Bot.* 258 (1851).  
T.: *Crepidomanes intramarginale* (Hook. & Grev.) C. Presl (*Trichomanes intramarginale* Hook. & Grev.)

## 10. Gleicheniaceae

- 10.1. Diplopterygium** (Diels) Nakai, *Bull. Natl. Sci. Mus. Tokyo* 29: 47 (1950).  
*Gleichenia* subgenus *Mertensia* section *Diplopterygium* Diels in Engler & Prantl, *Nat. Pflanzenfam.* 1(4): 353 (1900).  
T.: *Diplopterygium glaucum* (Thunb. ex Houtt.) Nakai (*Polypodium glaucum* Thunb. ex Houtt.)
- 10.2. Dicranopteris** Bernh., *Neues J. Bot.* 1(2): 38 (1806), *non Dicranopteris* Zalessky (1937, fossil fern).  
T.: *Dicranopteris dichotoma* (Thunb.) Bernh. (*Polypodium dichotomum* Thunb.)  
Substitute name for *Mertensia* Willdenow (1804), *non Mertensia* Roth, *nom. cons.* (1797)
- 10.3. Gleichenella** Ching, *Sunyatsenia* 5: 276 (1940).  
T.: *Gleichenella pectinata* (Willd.) Ching (*Mertensia pectinata* Willd.)
- 10.4. Sticherus** C. Presl, *Tent. Pterid.* 51 (1836).  
T.: *Sticherus laevigatus* (Willd.) C. Presl (*Mertensia laevigata* Willd.)
- 10.5. Gleichenia** Sm., *Mém. Acad. Roy. Sci. Turin* 5: 419. 1793, *nom. cons.*, *non Gleichenia* Necker (1790 = *Dryopteridaceae*).  
T.: *Gleichenia polypodioides* (L.) Sm. (*Onoclea polypodioides* L.)

**10.6. Stromatopteris** Mett., *Ann. Sci. Nat., Bot. ser. 4.* 15: 84 (1861).

T.: *Stromatopteris moniliformis* Mett.

## 11. Dipteridaceae

**11.1. Cheiropleuria** C.Presl, *Epimel. Bot.* 189 (1851).

T.: *Cheiropleuria bicuspis* (Blume) C.Presl (*Polypodium bicuspe* Blume)

**11.2. Dipteris** Reinw., *Syll. Pl. Nov.* 2: 3 (1825).

T.: *Dipteris conjugata* Reinw.

## 12. Matoniaceae

**12.1. Matonia** R.Br., *Pl. Asiat. Rar. (Wallich)* 1: 16 (1829), non *Matonia* Stephenson & Churchill (1831, = *Elettaria*, Zingiberaceae)

T.: *Matonia pectinata* R.Br.

**12.2. Phanerosorus** Copel., *Philipp. J. Sci., C 3:* 344 (1909).

T.: *Phanerosorus sarmentosus* (Baker) Copel. (*Matonia sarmentosa* Baker)

## 13. Lygodiaceae

**13.1. Lygodium** Sw., *J. Bot. (Schrader)* 1800(2): 7 (1801), *nom. cons.*

T.: *Lygodium scandens* (L.) Sw. (*Ophioglossum scandens* L.)

## 14. Schizaeaceae

**14.1. Actinostachys** Wallich, *Numer. List* 1 (1829).

T.: *Actinostachys digitata* (L.) Wallich (*Acrostichum digitatum* L.)

**14.2. Schizaea** Sm., *Mém. Acad. Roy. Sci. Turin* 5: 419. t. 9, f. 9 (1793), *nom. cons.*

T.: *Schizaea dichotoma* (L.) Sm. (*Acrostichum dichotomum* L.)

## 15. Anemiacae

**15.1. Anemia** Sw., *Syn. Fil. (Swartz)* 6. 1806 (*nom. cons.*), non *Anemia* Nuttall (1838 = *Anemopsis*, Saururaceae)

T.: *Anemia phyllitidis* (L.) Sw. (*Osmunda phyllitidis* L.).

## 16. Marsileaceae

**16.1. Pilularia** L., *Sp. Pl.* 1100 (1753).

T.: *Pilularia globulifera* L.

**16.2. Regnellidium** Lindman, *Ark. Bot.* 3(6): 2 (1904).

T.: *Regnellidium diphyllum* Lindman

**16.3. Marsilea** L., *Sp. Pl.* 2: 1099 (1753), non *Marsilea* Adanson (1763 = liverwort).

T.: *Marsilea quadrifolia* L.

## 17. Salviniaceae

**17.1. Azolla** Lam., *Encycl. (Lamarck)* 1: 343 (1783).

T.: *Azolla filiculoides* Lam.

**17.2. Salvinia** Ség., *Fl. Veron.* 3: 52 (1754).

T.: *Salvinia natans* (L.) All. (*Marsilea natans* L.)

## 18. Thyrsopteridaceae

**18.1. Thyrsopteris** Kunze, *Linnaea* 9: 507 (1835).

T.: *Thyrsopteris elegans* Kunze

## 19. Loxsomataceae

**19.1. Loxsoma** R.Br. ex A.Cunn., *Companion Bot. Mag.* 2: 366 (1837), as '*Loxoma*'. Printing error corrected by Hooker, *Gen. Fil.* ad t. 15 (1838).

T.: *Loxsoma cunninghamii* R.Br. ex A.Cunn.

**19.2. Loxsomopsis** Christ, *Bull. Herb. Boissier ser. 2.* 4: 399 (1904).

T.: *Loxsomopsis costaricensis* Christ

## **20. Culcitaceae**

**20.1. Culcita** C.Presl, *Tent. Pterid.* 135. t. 5(5) (1836).

T.: *Culcita macrocarpa* C.Presl (*Dicksonia culcita* l'Hér.)

## **21. Plagiogyriaceae**

**21.1. Plagiogyria** (Kunze) Mett., *Abh. Senckenberg. Naturf. Ges.* 2: 265 (1858).

*Lomaria* sect. *Plagiogyria* Kunze, *Farnkräuter* 2: 63 (1850).

T.: *Plagiogyria euphlebia* (Kunze) Mett. (*Lomaria euphlebia* Kunze)

## **22. Cibotiaceae**

**22.1. Cibotium** Kaulf., *Berlin. Jahrb. Pharm. Verbundenen Wiss.* 21: 53 (1820).

T.: *Cibotium chamissoi* Kaulf.

## **23. Cyatheaceae**

**23.1. Alsophila** R.Br., *Prodr.* 158 (1810).

T.: *Alsophila australis* R.Br.

**23.2. Cyathea** Sm., *Mém. Acad. Roy. Sci. Turin* 5: 416 (1793).

T.: *Cyathea arborea* (L.) Sm. (*Polypodium arboreum* L.)

**23.3. Gymnosphaera** Blume, *Enum. Pl. Javae* 2: 242. (1828), *non Gymnosphaera* Tassi (1902 = fungus).

T.: *Gymnosphaera glabra* Blume

**23.4. Sphaeropteris** Bernh., *J. Bot. (Schrader)* 1800(2): 122. t. 1(1) (1801), *non Sphaeropteris* Wallich (1830 = *Peranema*).

T.: *Sphaeropteris medullaris* (G.Forst.) Bernh. (*Polypodium medullare* G.Forst.)

## **24. Dicksoniaceae**

**24.1. Calochlaena** (Maxon) R.A.White & M.D.Turner, *Amer. Fern J.* 78: 91 (1988).

*Culcita* subg. *Calochlaena* Maxon, *J. Wash. Acad. Sci.* 12: 458 (1922).

T.: *Calochlaena dubia* (R.Br.) M.D.Turner & R.A.White (*Davallia dubia* R.Br.)

**24.2. Dicksonia** l'Hér., *Sert. Angl.* 30 (1789).

T.: *Dicksonia arborescens* l'Hér.

**24.3. Lophosoria** C.Presl, *Gefässbündel Farrn* 36 (1847).

T.: *Lophosoria pruinata* (Sw.) C.Presl (*Polypodium pruinatum* Sw.)

## **25. Metaxyaceae**

**25.1. Metaxya** C.Presl, *Tent. Pterid.* 59. t. 1(5) (1836).

T.: *Metaxya rostrata* (Kunth) C.Presl (*Aspidium rostratum* Kunth)

## **26. Lonchitidaceae**

**26.1. Lonchitis** L., *Sp. Pl.* 2: 1078 (1753), *non Lonchitis* Bubani (1901 = Orchidaceae)

T.: *Lonchitis hirsuta* L.

## **27. Saccolomataceae**

**27.1. Saccoloma** Kaulf., *Berlin. Jahrb. Pharm. Verbundenen Wiss.* 21: 51 (1820).

T.: *Saccoloma elegans* Kaulf.

**27.2. Orthiopterus** Copel., *Bull. Bernice P. Bishop Mus.* 59: 14 (1929).

T.: *Orthiopterus ferulacea* (T.Moore) Copel. (*Davallia ferulacea* T.Moore)

## **28. Cystodiaceae**

**28.1. Cystodium** J.Sm., *Gen. Fil. (Hooker)* t. 96 (1841), *nom. cons.*, *non Cystodium* Fée (1837, *nom rej.* = lichen)

T.: *Cystodium sorbifolium* (Sm.) J.Sm. (*Dicksonia sorbifolia* Sm.)

## **29. Lindsaeaceae**

**29.1. Sphenomeris** Maxon, *J. Wash. Acad. Sci.* 3: 144 (1913), *nom. cons.*

T.: *Sphenomeris clavata* (L.) Maxon (*Adiantum clavatum* L.)

**29.2. Odontosoria** Fée, *Mém. Foug.*, 5. *Gen. Filic.*: 325 (1852).

T.: *Odontosoria uncinella* (Kunze) Fée (*Davallia uncinella* Kunze) = *O. scandens* (Desv.) C.Chr.

**29.3. Nesolindsaea** Lehtonen & Christenh., *Bot. J. Linn. Soc.* 163: 336 (2010).

T. *Nesolindsaea caudata* (Hook.) Lehtonen & Christenh. (*Lindsaea caudata* Hook.)

**29.4. Osmolindsaea** (K.U.Kramer) Lehtonen & Christenh., *Bot. J. Linn. Soc.* 163: 335 (2010).

*Lindsaea* Dryand. ex Sm. section *Osmolindsaea* K.U.Kramer, *Blumea* 15: 560 (1967).

T.: *Osmolindsaea odorata* (Roxb.) Lehtonen & Christenh. (*Lindsaea odorata* Roxb.)

**29.5. Tapeinidium** (C.Presl) C.Chr., *Index Filic.* 631 (1906).
