

Hepatopancreas cells were lysed by 1/3 PBS

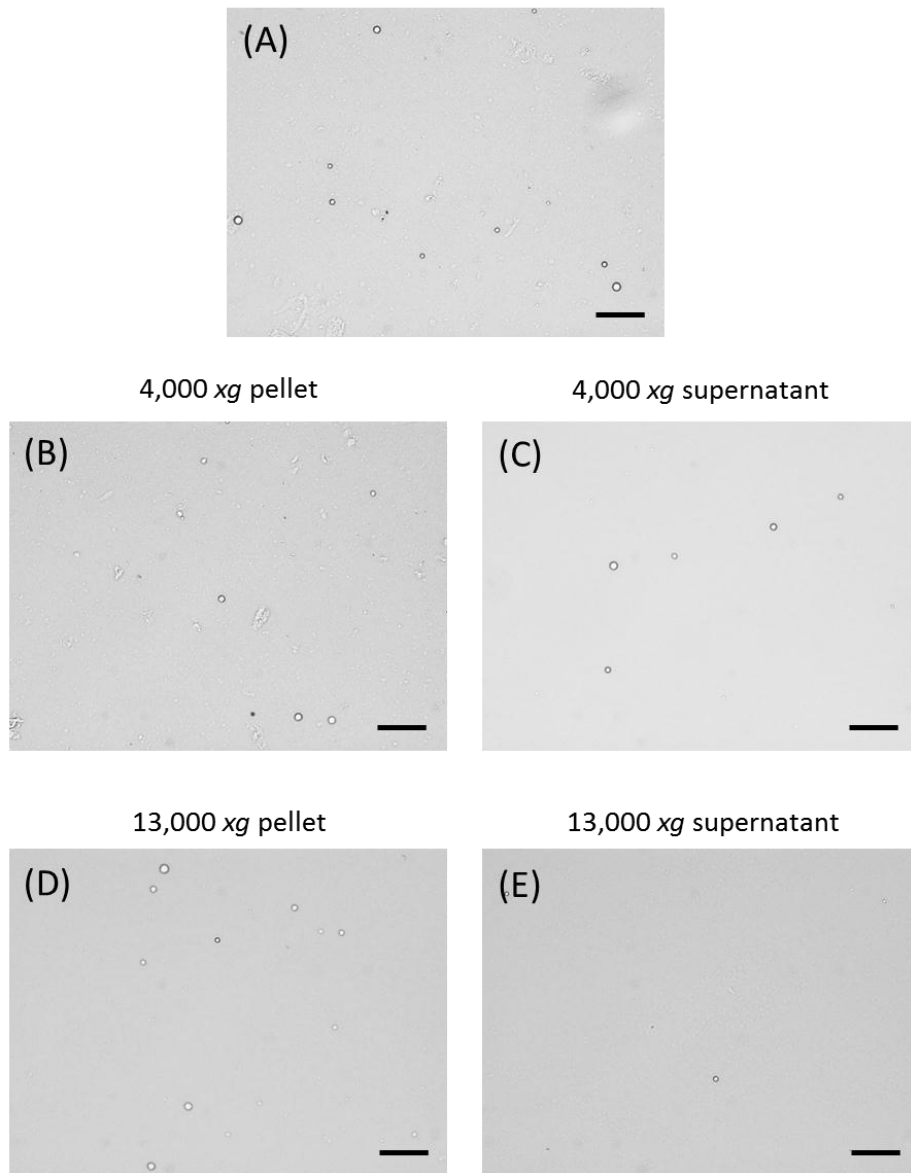

Fig. S4. Micrographs of PmNV OBs from PmNV-infected hepatopancreatic tissue that had been homogenized and lysed by 1/3 PBS. (A) Lysate of hepatopancreas was lysed by 1/3 PBS. (B) - (E) OBs in the resuspended pellets and the supernatants after centrifugation at 4,000 \times g for 10 min or 13,000 \times g for 30 min as indicated. Scale bar: 50 μ m.
