

Fig. S2. The conserved *helicase* and *pif-4* gene cluster on the genome of PmNV, HzNV-1, GbNV and OrNV (Figure adapted from Wang *et al.*, 2012. Nudivirus genomics and Phylogeny. In *Viral genomes – molecular structure, diversity, gene expression mechanisms and host-virus interactions* (Chapter 2). Intech. ). ORFs are represented by arrows. The numbers above and below the arrows represent the sequential ordering of the ORFs on the respective viral genomes. The viral genomes are represented as bold lines with omitted genomic ranges indicated by dots.
