PREFACE

The 1966 Census publication programme is made up of five individual Volumes, four consisting of a number of separate Parts, together with a series of supplementary statements in mimeographed form. The actual titles of the 1966 Census Volumes and Parts are listed in the back of this publication; the content of each is briefly as follows:

- Volume 1. Single characteristics of the population for Australia, Parts 1-11.—Age, marital status, birthplace, nationality, period of residence, education, religion, occupational status, industry, occupation and race.
- Volume 2. Related characteristics of the population for Australia, Parts 1-5.—Growth and distribution of the population, demographic data, overseas-born population, the work force, and families and households.
- Volume 3. Housing.
- Volume 4. Single characteristics of the population and dwellings in Local Government Areas, Parts 1-7.—New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, and Northern Territory and Australian Capital Territory.
- Volume 5. Population and dwellings in localities, Parts 1-7.—States and Territories as for Volume 4, and Part 8.—Australia.

This publication is Part 3 of Volume 1 and contains details of the birthplaces of the population enumerated at 30 June 1966 together with comparative data for previous censuses.

EXPLANATORY NOTES

Birthplace

At the 1966 Census, persons were asked to state birthplace in accordance with the following instructions.

For persons born in Australia write name of the State or Territory where born. For persons born outside Australia write the name of the country where born (not town or locality).

For the small number of cases where no reply was given the allocation of a birthplace was made in accordance with other information on the schedule (usually nationality).

Population distribution

The understanding and measurement of the process of urbanisation have long been recognised as fundamentally important to considerations of economic and social change. For this reason census information has traditionally been published separately for 'metropolitan', 'other urban', and 'rural' areas. However, the criteria used in the past for making this dissection (criteria which are still used in many countries) did not provide comparable data for different areas or for different points of time.

In Australian censuses up to and including the Census of 1947 complete local government areas were classified as either urban or rural, and 'urban' areas therefore usually consisted of whole local government areas, or multiples of them. However, many local government areas, particularly at the fringe of large urban complexes, contain both urban and rural components. In some cases it was necessary to split local government areas for statistical purposes in order to eliminate large rural expanses from the metropolitan areas. Boundaries of local government areas were also subject to variation for reasons unrelated to (and often conflicting with) statistical requirements, and consequently this method became increasingly unsatisfactory.

In the Censuses of 1954 and 1961 all localities of 1,000 population and over (750 and over in Tasmania) were classified as 'urban'. Boundaries were delineated either from local advice, inspection in the field, or from aerial photographs. However, although these procedures were an improvement on the earlier ones, the boundary decisions made for different urban centres, being highly subjective, did not always provide sufficient comparability from census to census nor between one centre and another.

Delimitation of urban centres

The principles and criteria used for the delimitation of urban centres in Australia at the 1966 Census were as follows:

A boundary was defined for all settlements with a population of 1,000 or more and these were named 'urban centres' except for the State capitals and Canberra which were named 'Metropolitan areas'. This boundary is one which, from census to census, as urbanisation proceeds, will be moved outwards to encompass any peripheral urban development.

For urban centres with a population of 30,000 and over, and for a few smaller centres, the following criteria were adopted for delimiting the urban centres.

- (a) The Metropolitan Area or urban centre was delimited by including all contiguous census collector's districts with a population density of 500 or more persons per square mile.
- (b) Certain collector's districts, although not reaching the required population density, were also included by virtue of—
 - (i) land use (e.g. factory areas),
 - (ii) being surrounded by urban collector's districts,
 - (iii) forming a 'bridge' between two urban centres less than two miles apart so that they could be regarded as one single urban centre.

For urban centres of less than 30,000 population, local government area boundaries were adopted, unless they contained a large rural component or urban development was known to extend beyond the local government boundary. In these cases they were delimited by inspection of aerial photographs, by field inspection, or by consideration of any other information available, and the boundaries were set as closely as possible to the periphery of the built-up area without regard to local government boundaries.

In areas with large numbers of holiday homes, many of which are unoccupied at the mid-winter census date, dwelling rather than population criteria were used. These criteria were 250 dwellings (in lieu of the 1,000 population mentioned above) and 125 dwellings per square mile (in lieu of the 500 persons per square mile mentioned above).

Around each metropolitan area and urban centre with a population of at least 75,000 and a regional population of at least 100,000, a further boundary was defined, designed to circumscribe an area which would contain the urban development of that centre for at least 20 years and which would generally be socially and economically oriented to the centre. These areas were designated 'Statistical Divisions' (for State capital cities) or 'Statistical Districts' (for Canberra, Newcastle, Wollongong and Geelong).

Because the new criteria for the delimitation of urban boundaries were adopted only shortly prior to the 1966 Census a few collector's districts containing urban growth were not split into their rural and (potentially) urban components, with the result that significant urban population remained included in large, predominantly rural, collector's districts, which did not meet the density criterion. Such cases occurred mainly around the Sydney Metropolitan Area and Urban Toowoomba. The effect on the Sydney Metropolitan Area is small, probably not more than 5,000 urban population having been omitted. In Toowoomba the effect is proportionately much greater, the urban population probably being understated by up to 3,000 persons.

Migratory population

The migratory population consists of persons who, at midnight between 30 June 1966 and 1 July 1966, were enumerated on board ships in Australian ports, or ships which had left an Australian port prior to census night with a next port of call in Australia. It also includes persons, who at census time, were enumerated on long-distance trains, motor coaches or aircraft.

General

The criteria adopted at the 1966 Census allow more reliable comparison of the population of different areas at the one point in time. However, comparison with section of State data of previous censuses is limited because of the different bases upon which these areas were defined at the earlier censuses. Although detailed comparison at the individual characteristic level is not possible the population enumerated at the 1961 Census has been allocated retrospectively to each section of State on the basis of the criteria adopted for the 1966 Census and the following table gives some indication of the differences caused by the application of the new criteria in each State. Unfortunately, it is not practicable to extend this table to show similar comparisons for censuses prior to 1961 nor to include details of the effect of the new criteria upon population allocation to section of State according to individual characteristics.
